

Nikolaos Sidiropoulos

+30 6977578331 | n.sidiropoulos97@gmail.com | Brussels, Belgium

Software Engineer

I build products from scratch and see them through to launch. I enjoy turning ideas into tools carefully shaping both the technical architecture and the user experience.

Experience

Ceevya | Remote

Creator & Software Engineer | 01/2025 - Present

I created Ceevya to reimagine how professionals present themselves online, not just through static resumes, but through personal websites that communicate experience, personality, and potential.

From concept to launch, I led every part of the product, defining its core value, shaping the user experience, handling subscriptions, and building the platform that powers each site. The result is a live, self-serve product with both free and paid tiers, used by individuals to host smart, interactive resumes with AI chat.

Oblisoft | Remote

Co-Founder & Software Engineer | 10/2024 - Present

I led the development across the entire stack: architecture, backend, frontend, user flow, infrastructure, and deployment.

Created the company website and our first product Omicron which is SaaS tool that combines microservices to automate daily processes.

BNP Paribas Fortis | Brussels

Software Engineer | 02/2023 - Present

- Designing, implementing, testing, and maintaining web applications, ensuring high performance and responsiveness.
- Troubleshooting, debugging, and upgrading existing systems to enhance functionality and user experience.
- Deploying applications on server environments, optimizing for efficiency and reliability.
- Utilizing advanced search and analytics within web applications to improve data retrieval and insights.

Interamerican | Athens

Junior Software Engineer | 02/2022 - 02/2023

- Design, implement, test and maintain various, mostly web-based, critical software applications.
- Troubleshoot, debug and upgrade existing systems.
- Define technical specifications by understanding business requirements.
- Identify and propose new technologies and tools that solve problems that fit the development model.
